

Inard and fast

MS EXPRESS FROM SPIES HECKER

Since launching the new generation medium solid (MS) Express hardener range towards the end of last year, Spies Hecker brand manager, Claire Bowen, reports that feedback from body shop customers has been pleasingly positive.

"Product benefit hype is always part and parcel of any new product launch. However,

our customers are telling us that these new technology hardeners have lived up to and exceeded their expectations in terms of properties and performance. Simply put, these products do the job."

The MS Express products are the new standard hardeners for Spies Hecker's Permacron™ top and

clear coats as well as 2K high solid surfacers. Highly flexible and easy to mix, their excellent flow properties offer high resistance to solvent popping, fast surface drying and improved through cure. Gloss retention is high and their weathering and mechanical properties are excellent.

With a lower VOC value than old technology MS hardeners, the 3333, 3344 and 3355 MS Express range caters for all painting conditions and sizes of jobs. All three are available in one and five litre tins, with the extra fast 3355, also available from Spies Hecker distributors in 0.5 litre cans.

Simply Closer Through Training

It's never too late to learn and Spies Hecker is committed to furthering the skills of its refinishing partners countrywide.

In addition to our 2006 Training Calendar, we have also invested in a comprehensive Training Brochure that provides refinishers with all the information relevant to these skills development courses.

The training calendar provides details of dates and course content at Barloworld Automotive Coatings' centres in Gauteng, the Western Cape and KwaZulu-Natal and is a must-have for refinishers.

AEI

AUTOMOTIVE EQUIPMENT INTERNATIONAL (PTY) LTD

AEI are able to offer a host of Automotive Refinishing products including compressors, clamps, pumps, air tools, lifts and jacks.
