CLEAR COATS TO SUIT ALL YOUR BODY SHOP NEEDS

Body shops are increasingly becoming specialised and there is an apparent need for more customised solutions to suit body shop needs. As a result, Spies Hecker is introducing a new basket of products that will address these changing market needs.

Well-renowned for pioneering refinishing technologies Spies Hecker has just launched the new Permacron® VarioPlus Clear Coat 8050 and Rapid Clear Coat 8005 into the market.

A clear coat has to be perfect. And a modern clear coat has to combine ease of application with gloss and flow. However, since the conditions in each repair shop differ, it is essential that the clear coat is capable of adapting. Spies Hecker's Permasolid HS and MS clear coat range contains six products, each with a different profile that enables them to adapt precisely to all your body shops conditions.

The combination of gloss and productivity as demonstrated by the New VarioPlus Clear Coat 8050 and the Rapid Clear 8005 address the needs of any body shop.

Unbeatable gloss

Permacron® VarioPlus clear coat 8050:

- Very good filling power and highgloss results
- Excellent paint flow
- Easy handling and reliable application
- Very good vertical stability
- Quick drying (20-30 min/ + 60°C) = higher throughput possible.

Profitability

Permacron® Rapid Clear 8005:

- Very quick drying
- Superb gloss and flow
- Fast drying properties
- Fast application - short spraying time
- Good vertical stability

The Cologne-based company is one of the world's leading manufacturers of refinishing paints. In over 60 countries, Spies Hecker offers its customers easy-to-use products, practical solutions and personal service on site.

Smooth Blending

Easy processing, rapid application and high versatility. Spies Hecker's new Permacron® Speed Blender 1036 is the key to cost-effective and skilful blend-in jobs.

With time being so precious, the repairshop has to calculate competitive prices. Minor accident damage to bumpers, side panels and doors is quickly repaired. However, it is only by applying high-speed repair processes and perfectly balanced products that refinishers can eliminate minor damage efficiently and skilfully.

The particular challenge of Speed Repairs is blending -in the paint material. This is where smooth and invisible blends are all-important. Improved wetting and flexible application.

With new Spies Hecker Permacron® Speed Blender 1036, both Permasolid Top Coats and Permasolid HS Clear Coats can be blend-in in fine graduations, as the product partially dissolves the existing paint.

To achieve quality results, the blend-in additive is applied undiluted to the blend-in area within the sanded surface. This makes application easier and reduces process time. In addition, its good polishing characteristics ensure excellent gloss.

High-grade paints and a close relationship with the vehicle refinishing trade – this has been the philosophy of Spies Hecker for 125 years.
